Full Stack Developer | NestJS, Python, Angular, Java, AWS Services

PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience in full stack development, web applications, backend services and cloud-based solutions. Current experience at Hostlyc building backend services with NestJS and Python, integrating REST APIs, relational databases and selected AWS services such as Lambda, S3 and RDS. Strong background in Angular, Ionic, Java-based environments, server administration, Git workflows, Figma and AI-assisted development with tools such as Codex and Claude.

EDUCATION

Bachelor of Software Engineering - Universidad Veracruzana
Ixtaczoquitlan, Veracruz

September 2021 - August 2025

PROFESSIONAL EXPERIENCE

Full Stack Developer - Hostlyc

June 2024 - Present

- Develop backend services and internal platforms using NestJS and Python, integrating REST APIs, authentication flows, validation layers and business logic for production-oriented solutions.
- Build and maintain Angular-based web modules connected to backend services, improving usability, traceability and secure data handling across platform workflows.
- Work with relational databases and cloud resources, including selected AWS services such as Lambda, S3 and RDS, to support scalable application features and operational processes.
- Support server administration, deployments, environment configuration, SFTP/FTP operations, Git-based collaboration and technical documentation for continuous delivery.
- Use AI agents such as Codex and Claude to accelerate code analysis, documentation, assisted development and the integration of AI into development workflows.

Front End Developer / Requirements Analyst - Gecosoft

June 2022 - May 2024

- Gathered business and user requirements, documented functional needs and translated them into technical tasks, interface flows and deliverable modules.
- Developed responsive front end modules using Angular, Ionic and reusable components, consuming REST services and validating user-facing workflows.
- Collaborated with Java-based backend environments by testing APIs, reviewing service contracts and supporting integration between web interfaces and server-side processes.
- Created wireframes and visual adjustments in Figma, supported functional testing and managed issues using Git, Postman and Visual Studio Code.

TECHNICAL SKILLS

Languages & frameworks: TypeScript, JavaScript, Python 3.9+, Java 11+, SQL, HTML, CSS, Angular 14+, Ionic, React basics, NestJS and basic Node.js/Express.

Backend & web services: REST API development and consumption, authentication, validation, middleware, Postman, service integration and web development.

Databases: MySQL, Oracle, AWS RDS, relational database connections, SQL querying and basic data modeling.

AWS - strong: Cognito, API Gateway, Lambda, SQS, S3, RDS, CloudWatch and Elastic Beanstalk.

AWS - intermediate: EC2, Pinpoint, AWS Well-Architected practices and improvement of AWS development practices.

DevOps & deployment: Git, GitHub, Terraform, CI/CD, Linux/VPS server administration, SFTP/FTP servers, Vercel deployments, domains, SSL and environment configuration.

Tools & AI: Visual Studio Code, Figma, Codex, Claude, AI-assisted development, technical documentation and Microsoft Office.

Professional skills: Self-taught, proactive, teamwork, problem solving, ownership and continuous improvement mindset.
